This map displays 2012 high resolution orthophotography for the Town of Connecticut. It is a natural color, leaf off, 1 foot (30.5 meter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street level data such as major intersections, ES routes, major streets, streets, railroads, and utility crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, town stations, and town boundaries. Important geographic locations and transformers are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Aerial imagery is provided through partnerships between Connecticut Department of Emergency Services and Public Protection (DEEP), the Connecticut Department of Transportation (CDOT), and the United States Geological Survey (USGS) along with the State’s Office of Geomatics (OOG). DEEP MAP DATA: Based on data originally from 1:24,000 scale (USGS 7-5 minute topographic) quadrangle maps published between 1960 and 1990 and updated through construction and road maps. Data on roads is accurate to within 50 feet. DEP’s copyrighted data. Some map information is in another current use complexity.
