This map displays 2012 high resolution orthophotography for the State of Connecticut. It is a natural color, leaf-off, 1-foot (0.30 meter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street level data such as major intersections, T-intersections, state routes, major railroads, and ferry crossings are displayed but may not match the locations of such features on this orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and landmarks are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Protection (DESPP), the Connecticut Department of Transportation (CDOT), and the National Oceanic and Atmospheric Agency (NOAA) along with the United States Geological Survey (USGS) providing support through project management, contracting and quality assurance/quality control (QA/QC).

HARD MAP DATA: Based on data originally from 1:24,000 scale USGS 7.5-minute topographic quadrangle maps published between 1989 and 2000. Includes political boundaries, roads, county, geographic names and population places. Points and lines were vectorized from 1:6,000 copyrighted data. These map information in another current use complete.
