This map displays 2012 high resolution orthophotography for the State of Connecticut. It is a natural color, leaf-off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. The location and shape of features in other data layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street level data such as major intersections, ESRI names, street names, streets, railways, and ferry crossings are displayed; it may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and some boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

OROPHTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Protection (DESPP), the Connecticut Department of Transportation (CDOT), and the National Oceanic and Atmospheric Agency (NOAA), along with the United States Geological Survey (USGS). Providing support through project management, contracting, and quality management are certified (ISO). Hedge MAP DATA: Based on data acquired from the 1:2,500 scale USGS 7.5 minute topographic quadrangle maps published between 1985 and 1999. It includes political boundaries, waterbodies, geographic names and geographic place names. Streets and other names are from the USGS copyrighted data. These map information is in another current map complete.
