2012 Color Orthophoto
Leaf-Off
New London, CT

EXPLANATION
This map displays 2012 high-resolution orthophotography for the State of Connecticut. It is a natural color, leaf-off, 1-foot (30.5-centimeter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major intersections, US routes, state routes, streets, railways, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Protection (DESP), the Connecticut Department of Transportation (CDOT), and the National Oceanic and Atmospheric Administration (NOAA), along with the United States Geological Survey (USGS) providing support through project management, contracting and quality assurance/quality control (QA/QC).
BASE MAP DATA: Based on data originally from 1:24,000 scale USGS topographic quadrangle maps published between 1991 and 1999. It includes public transportation, railroads, major parks, geographic names and geographic place names. Roads and other names are from the ESRI* copyrighted data. These map information is in another current use complete.

MAPPING PRODUCT DATA: NISS Mapping Resources Inc. provided the DEM (Digital Elevation Model) and a variety of others to FESL licensed. Visit the CT ESD website to download the base map digital special data shown on this map.
