This map displays 2012 high resolution orthophotography for the State of Connecticut. It is a natural color, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. The location and shape of features in other DHS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street level data such as major intersections, US routes, state routes, streets, railroads, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY: Aerial imagery is provided through partnership between Connecticut Department of Emergency Services and Public Protection (DESPP), the Connecticut Department of Transportation (CDOT), and the National Aeronautics and Space Administration (NASA), along with the United States Geological Survey (USGS) providing support through project management, contract and quality assurance/quality control (QA/QC).

ROAD MAP LAYER: Based on data originally from 1:12,000 scale CUSGS 7.5 minute topographic quad sheets maps published between 1976 and 1994. It includes political boundaries, roads, airports, geographic names and geographic places. Water bodies names are from USGS copyrighted data. These map information is another current use complete.
