This map displays 2012 high-resolution orthophotography for the State of Connecticut. It is a natural color, leaf-off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Features such as major buildings, street names, streets, railroads, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, transit stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Aerial imagery is provided through partnerships between the Connecticut Department of Emergency Services and Public Protection (CTDEPP), the Connecticut Department of Transportation (CDOT), and the United States Geological Survey (USGS) along with the United States Geological Survey (USGS) providing support through project management, contracting, and quality assurance/quality control (QA/QC).

BASE MAP DATA: Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, geographic names, and geographic places. Water and flood waters are from flood floodwater information is another custom one complete.

MAPS AND DIGITAL DATA: Maps are sold in PDF format. The map and a variety of others in PDF format. Visit the CTDEPP website to download the two map digital special data sheets on this map.
