This map displays 2012 high-resolution orthophotography for the State of Connecticut. It is an aerial color, leaf-off, 1-foot (30 cm) mean aerial survey taken in the spring of 2012. The location and shape of features in other data layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major intersections, ES interfaces, street names, streets, railroads, and utility crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY: Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Protection (DESPP), the Connecticut Department of Transportation (CDOT), and the National Oceanic and Atmospheric Agency (NOAA), along with the United States Geological Survey (USGS) providing support through project management, contracting, and quality assurance/quality control (QA/QC).

BASE MAP LAYERS: Based on data originally from the 2013 U.S. 1-foot National Topographic Database, water bodies, geographic names, and geographic places. Roads and street names are from flags, copyrighted data. Since map information is another current use complete.
