2012 Color Orthophoto
Leaf-Off
Hamden, CT
(North)

EXPLANATION
This map displays 2012 high-resolution orthophotography for the Town of Connecticut. It is a natural color, leaf-off, 1-foot (30-meter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and date collection dates. Street-level data such as major intersections, US routes, state routes, owners, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and features are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Aerial imagery is provided through partnering between Connecticut Department of Emergency Services and Public Protection (DEEPS), the Connecticut Department of Transportation (CDOT), and the National Oceanic and Atmospheric Agency (NOAA), along with the United States Geological Survey (USGS) providing support through project management, contract, and quality assurance/quality control (QA/QC).

BASE MAP DATA: Based on data originally from US Geological Survey (USGS) 7.5-minute topographic quadrangle maps published between 1930 and 1990. It includes public facilities, railroads, airports, geographic names, geographic places, streams, and forest areas are from 2012, copyrighted data. These map information is another current use complete.

MAP GENERATING DATA: This map is generated using ArcGIS software for the display and a variety of data from the USGS. Visit the DEEPS website to download the base map digital data (.shp) for this map.
