This map displays 2012 high-resolution orthophotography for the State of Connecticut. It is a natural color, leaf-off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street level data such as major intersections, US routes, state routes, airports, railroads, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and some landuse and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY: Aerial imagery is provided through partnerships between Connecticut Department of Emergency Services and Public Protection (DESP), the Connecticut Department of Transportation (DOT), and the National Agricultural Statistics Service (NASS) along with the United States Geological Survey (USGS) providing support through project management, contracting and quality assurance/quality control (QA/QC).

BASE MAP DATA: Based on data supplied by 1:24,000 scale USGS 7.5 minute topographic quadrangle maps published between 1962 and 1984. Includes political boundaries, railroads, airports, geographic names and geographic places. Streets and their names are from 5th Edition U.S. 7.5’ quadrangle data. Base map information is subject to current use compliance.
