This map shows 2012 high-resolution orthophotography for the State of Connecticut. It is a natural color, leaf-off, 1-foot (0.30-meter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers are not exactly the same as shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major intersections, US routes, state routes, streets, railways, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, transit stations, and some boundaries. Important geographic locations and landmarks are labeled.

DATA SOURCES
ORTOPHOTOGRAPHY: Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Protection (DESP), the Connecticut Department of Transportation (CDOT), and the National Agricultural Imagery Program (NAIP), along with the United States Geological Survey (USGS) providing support through project management, contracting, and quality assurance/quality control (QA/QC).

BASE MAP DATA: Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, geographic names and geographic places. Streets and other named roads from 1991 USGS topographic data. Since map information is from current or complete.
