This map displays 2012 high resolution orthophotography for the State of Connecticut. It is a natural color, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data such as major intersections, CSOs, storm drains, streets, railroads, and ferry crossings are displayed yet may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY: Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Protection (DEEP), the Connecticut Department of Transportation (CDOT), and the National Geospatial Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project management, contracting, and quality assurance/quality control (QA/QC).

BASE MAP DATA: Based on data originally from 1:24,000 scale USGS topographic quadrangle maps published between 1969 and 1978. Includes political boundaries, roads, airports, geographic names, and geographic places. Water and base names are from 1:24,000 scale orthophoto data. Data may not be current or complete.

BAND MAP DATA: Based on data originally from 1:24,000 scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1978. Includes political boundaries, roads, airports, geographic names, and geographic places. Water and base names are from 1:24,000 scale orthophoto data. Data may not be current or complete.
