This map displays 2012 high resolution infrared orthophotography for the town of Connecticut. It is a color infrared, leaf off, 1 foot (30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping applications. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection times. Structured data such as major intersections, US routes, state routes, streets, railroads, and city boundaries are depicted but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, Danbury area, Indian reservations, and other boundaries. Important geographic locations and landmarks are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Public Protection, Division of Land Surveying and Mapping, the Connecticut Department of Transportation (CTDOT), and the National Imagery and Mapping Agency (NIMA) of the National Geospatial-Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project management, contract and quality assurance/quality control (QA/QC).
