This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.3 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping and rural development. The location and shape of features in other data sets will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of each feature on the orthophotography. Also shown are airports, hospitals, schools, churches, major waterbodies, and other locations. Important geographic locations and 'landmarks' are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Public Safety, Connecticut Forestry Service, and the Narragansett Pequot Indian Tribe, with additional support through project management, contracting and quality assurance/quality control (QA/QC).
BASE MAP DATA - Based on data supplied from 1:24,000 scale USGS 7.5 minute topographic quadrangle maps published since the 1970's. © 2013 USGS, none of the topographic quadrangle maps were modified. Flooded and burned areas from the November 2011 wildfires are included in aerial photography. Drowned and burnt areas from the November 2011 wildfires are included in aerial photography.Streams and lakes are based on 1:24,000 scale USGS 7.5 minute topographic quadrangle maps. All data is subject to change over time due to topographic and vegetation changes.
MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the free map digital spatial data shown on this map.
