This map displays 2012 high resolution infrared orthophotography for the town of Connecticut. It is a color infrared, leaf off, 1 foot (0.30-meter) aerial survey taken in the spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping features. The location and shape of features in other IRS items will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structural data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, schools, parks, rail stations, and other locations. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security and National Geospatial-Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project management, contracting and quality assurance (QA/QC).

BASE MAP DATA - Based on data acquired from 1:24,000-scale USGS 7.5-minute topographic quadrangle maps published between 1949 and 2005. The base map includes topographic features, hydrography, elevation, transportation, and geographic objects. Streets and other features are displayed as they were known in 2012.

MAP AND DIGITAL DATA - Visit the CT DEP website for the map and a variety of other resources in PDF format. Visit the CT DEP website to download the free map digital spatial data shown on the map.
