This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a
color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared
orthophotography provides many services, such as observing crop and vegetation conditions as well as
supporting regional planning and mapping applications. The location and shape of features on other GIS items
will not exactly match information shown in the aerial
photography primarily due to differences in spatial
accuracy and data collection times. Structured data
such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not
match the locations of such features on the
orthophotography. Also shown are airports, hospitals,
boundaries, Important geographic locations and
waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency
Management and Public Protection (CT DEEP), the Connecticut Department of Transportation (DOT), and the National Geospatial
Intelligence Agency (NGA). Orthophotography is taken in the Spring of 2012. This infrared
photography primarily due to differences in spatial
accuracy and data collection times. Structured data
such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not
match the locations of such features on the
orthophotography. Also shown are airports, hospitals,
boundaries, Important geographic locations and
waterbodies are labeled.

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published
between 1969 and 1992. It includes political boundaries, railroads, airports, geographic names and geographic places. Streets and
street names are from Tele Atlas® copyrighted data. Base map information is neither current nor complete.
