EXPLANATION

This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30-meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping efforts.

The location and shape of features in other GIS layers will not exactly match the locations of such features on the orthophotography. Also shown are airports, hospitals, management, contracting and quality assurance/quality control (QA/QC).

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Energy and Environmental Protection (DEEP), Towns of Durham, Madison, Killingworth and Killingworth. Orthoimagery and Image Analysis Survey (IAMS) software support data project management, converting and quality assurance/quality control (QA/QC).

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published from 1945 through 1980. U.S. Geological Survey (USGS) data products include national geographic database, streets and labels, waterbodies, political boundaries, and other geographic features. These and other data sources are maintained and distributed by various geographic offices. Streets and other geographic feature data are maintained by municipal, town, and state agencies.

MAP AND DIGITAL DATA - Visit the CT DEEP website for this map and a variety of others in PDF format. Visit the CT DEEP website to download the base map digital spatial data shown on this map.
