This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (30-meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping features. The location and shape of features in other GIS layers orthophotography. Also shown are airports, hospitals, such as major interstates, US routes, state routes, streets, and towns and cities. Important geographic locations and "name" features are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Protection (DESPP), the Connecticut Department of Transportation (DOT), and the Federal Geographic Data Committee (FGDC), collecting and maintaining geographic data (coordinates). BASE MAP DATA - These data are derived from USGS 7.5 minute topographic quadrangle maps published in 1955 and 1982. All data is derived from the latest, most accurate source. This map is not colorfast. Map prepared by CT DEP February 2013.
