This map displays 2012 high resolution infrared orthophotography for the Town of Connecticut. It is a color infrared, leaf off, 1 foot (0.3 meters) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping areas. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of each feature on the orthophotography. Also shown are airports, highways, railroads, waterways, land parcels, and other boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security (DEMHS), the Connecticut Department of Transportation (CDOT), and the National Imagery and Mapping Agency (NIMA) as part of the 1-foot national mapping program. Imagery is published under Public Law 99-515, 16 USC 433d. Additional information is available at theCT ECO website.

BASE MAP DATA - Based on data originally from 1:10,000 scale USGS 7.5 minute topographic quadrangle maps published under Public Law 99-515, 16 USC 433d. All data related to street names and addresses are derived from the Esri Topo US data. Streets and addresses are updated using data from the US Census, the United States Postal Service, and the town of Winchester. Additional information is available at the CT ECO website.

MAPS AND DIGITAL DATA - Visit the CT ECO website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on this map.
