supporting identification and mapping of habitat areas. Observing crop and vegetation conditions as well as matched the locations of such features on the orthophotography. Also shown on airports, hospitals, important geographic locations and waterbodies are labeled. Important geographic locations and boundaries. Map prepared by CT DEEP.

Data Sources

Orthophotography: Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security (CT-DEMS), the Connecticut Program Office for Emergency Management (CPEM), and the Federal Emergency Management Agency (FEMA). Aerial Imagery data is from the National Geospatial-Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project funding.

Base Shape Data: Based on data originally from 1:24,000-scale U.S. Geological Survey topographic quadrangle maps published during 1955-1990 and 1:24,000-scale U.S. National Map Service topographic quadrangle maps published during 1905-1995. All data is from the National Geospatial-Intelligence Agency (NGA) and United States Geological Survey (USGS).

Maps and Digital Data: View the CT DEEP website for the map and a variety of other similar GIS tools. For more information, visit the CT DEEP website to download the free map spatial data shown on the map.
