EXPLANATION

This map displays 2012 high resolution infrared orthophotography for the Town of Connecticut. It is a color infrared, leaf off, 1 foot (30-meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing tree and vegetation conditions as well as supporting identification of mapping and land use. The locations and shapes of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features in the orthophotography. Also shown are airports, hospitals, schools, parks, major rivers, and other locations. Important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Rescue, U.S. Geological Survey 1999 (USGS), and the Federal Geographic Data Committee (FGDC). federally approved project management, coordinating, and quality assurance protocol (IQAP).

MAPS AND DIGITAL DATA - Visit the CT DEEP website for the map and a variety of others in PDF format. Visit the CT DEEP website to download the base map digital spatial data shown on the map.
