This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping and hazard areas. The locations and shapes of features in other GIS data will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed here. New urban or suburban areas are detected on the infrared images. Photographs are taken at 50% overlap and black and white 0.5 meters with color infrared, leaf off, 1 foot (0.30 meter) aerial survey orthophotography for the State of Connecticut. DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Energy and Enviromental Protection, Federal Emergency Management Agency (FEMA), National Geospatial-Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project management, contracting and quality assurance/quality control (QA/QC).

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, geographic names and geographic places. Streets and town names are from Tele Atlas® copyrighted data. Base map information is neither current nor complete.
