This map displays 2012 high resolution infrared orthophotography for the area of Connecticut. It is a color infrared leaf-off, 1 foot (0.30-meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting clear and interpretable geographic basemaps. The structure and state of features in other DEP items will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but are not match the locations of each feature on the orthophotography. Also shown are airports, hospitals, schools, parks, waterbodies, important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security, Office of the Connecticut Department of Transportation (CT-DOE), and the National Geospatial Intelligence Agency (NGA) along with the United States Geological Survey (USGS). Data is property of the Connecticut Department of Emergency Management and Homeland Security.

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, geographic names and geographic places. Streets and supporting clear and interpretable geographic basemaps.

MAPS AND DIGITAL DATA - Visit the CT DEP website for link-map and a variety of datasets in PDF format. Visit the CT DEP website to download the free map digital spatial data shown on this map.
