This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation condition as well as supporting identification and mapping efforts. The location and shape of features other ortho data will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structural data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, major parks stations, and other important geographic locations and waterbodies are labeled.

DATA SOURCES
BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published prior to 2000 and USGS, 1:24,000-scale imagery, to include air photo imagery, aerial photography, ortho photography and/or digital orthophotography services. Streets and other structural data are derived from the 2012 Orthophoto data. Other data sources include topographic data, aerial photography, road and rail data, and other sources as needed to support the information shown.
MAPS AND DIGITAL DATA - Visit the CT DEEP website for the map and a variety of other items in PDF format. Visit the CT DEEP website to download the base-map digital spatial data shown on the map.
