This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping and analysis of features. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structures such as major interstates, US routes, state routes, streets, subdivisions, and utility crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, parks, schools, and other important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Public Protection Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project management, contracting and quality assurance to the NGA.
BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published through 1991 by the Connecticut Department of Emergency Management and Public Protection (DEM), and the National Geospatial-Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project management, contracting and quality assurance to the NGA.
MAPS AND DIGITAL DATA - Visit the CT DEM website for this map and a variety of other maps in PDF format. Visit the CT DEM website to download the base map digital spatial data shown on this map.
