This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping and monitoring. The location and shape of features in other GIS items will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structural data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not exactly match the locations of such features on the orthophotography. Also shown are airports, hospitals, railroads, and ferry crossings. Important geographic locations and boundaries are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Rescue, Connecticut Department of Energy and Environmental Protection, the Connecticut Department of Transportation (CDOT), and the National Imagery and Mapping Agency (NIMA). CDOT orthophoton was acquired through project management, contracting, and quality assurance/quality control (QA/QC).

BASE MAP DATA - Based on data imported from 1:24,000-scale U.S.GS 7.5-minute topographic quadrangle maps published since 1999 and 2001-10 National Hydrography Dataset (NHD) data. Also shown are airports, hospitals, railroads, and ferry crossings. Important geographic locations and boundaries are labeled.

MAPS AND DIGITAL DATA - Visit the CT DEP website for free maps and a variety of data in PDF format. Visit the CT DEP website to download this map's digit data shown on the map.
