2012 Color Infrared Orthophoto
Leaf-Off
Windsor, CT (North)

EXPLANATION
This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf-off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions, as well as supporting identification and mapping applications. The location and shape of features in other ERIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, railroads, and ferry crossings are displayed but may not match the locations of each feature on the orthophotography. Also shown on airports, hospitals, nursing homes, fire stations, and other boundaries important geographic locations and relationships are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security, the Connecticut Department of Transportation (DEEP), and the National Geospatial-Intelligence Agency (NGA). This aerial imagery has been orthorectified at 1 foot (0.30 meters) resolution and provided in Lambert Conformal Conic Projection.
BASE DATA - Base data are derived from USGS 1:24,000 scale USGS 7.5 minute topographic quadrangle maps published in paper and digital formats. This aerial imagery is updated to reflect the locations of airports, hospitals, nursing homes, fire stations, and other boundaries important geographic locations and relationships are labeled. This aerial imagery may have more detail but may not match the exact locations of each feature shown in the data.

MAPS AND DIGITAL DATA - Visit the CT DEEP website for the map and a variety of others in PDF format. Visit the CT DEEP website to download the free map digital spatial data shown on the map.
