This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting school and neighborhood mapping efforts. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structural data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not reach the locations of each feature on the orthophotography. Also shown are airports, hospitals, landmarks, important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Energy and Environmental Protection (DEEP) and the Connecticut Department of Transportation (CDOT) under the Federal Highway Administration (FHWA) 2012 High Resolution Infrared Orthophotography Project. The infrared orthophotography is color infrared, leaf off, 1 foot (0.30 meter) aerial survey survey. OGD-CT, project name, and related data management, maintaining, and quality assurance/quality control (QA/QC).

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published from 1969 to 1992. It includes political boundaries, railroads, airports, geographic names and geographic places. Streets and their location are labeled but may not reach the locations of each feature on the orthophotography. Also shown are airports, hospitals, landmarks, important geographic locations and waterbodies are labeled.

EXPLANATION

2012 Color Infrared Orthophoto

Leaf-Off
