This map displays 2012 high resolution infrared orthophotography for the Town of Prospect. It is a color infrared, leaf off, 1 foot (0.30-meters) aerial survey taken in the spring of 2012. This infrared orthophotography provides many services, such as observing tree and vegetation condition as well as supporting identification of mapping and inventory of the location and shape of features in other GIS layers. The location and shape of features in other GIS Layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the location of each feature on the orthophotography. Also shown are airports, hospitals, schools, parks, main stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY: Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security and the Connecticut Department of Transportation (CDOT), and the State Land Survey (SLS). Imagery support through project management, cost-sharing and quality assurance/quality control (QA/QC).
BASE MAP DATA: Based on data collected from 1:20,000-scale USGS 7.5 minute topographic quadrangle maps published between 1959 and 1989. The data includes water bodies such as rivers, streams and lakes, major streets and railroads, and geographic shape features. Streets and railroads may not match the location of each feature in the orthophotography. Also shown are airports, hospitals, schools, parks, main stations, and town boundaries.

MAPS AND DIGITAL DATA: Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the base map digital spatial data shown on the map.
