This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping data. The locations and shapes of features in other ORIs may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, and other important geographic locations and features.

DATA SOURCES
ORTHOPHOTOGRAPHY – Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Protection (CT DEEP), the Connecticut Department of Transportation (CT DOT), and the National Geospatial Intelligence Agency (NGA). The imagery was processed using which supports CT DEEP's management, contracting and quality assurance (QA/QC).
BASE MAP DATA – Based on data originally from 1:20,000 scale USGS 7.5 minute topographic quadrangle maps published between 1949 and 1979. The USGS 7.5 minute topographic quadrangle maps are produced primarily through surveys, geologic and land use studies, and aerial photographs. Streets, and other selected geographic features such as minor control, railroads, and other structures are provided by the United States Census Bureau.
MAPS AND DIGITAL DATA – Visit the CT DEEP website for this map and a variety of others in PDF format. Visit the CT DEEP website to download this map digital spatial data shown on the map.
