This map displays 2012 high resolution infrared orthophotography for the Town of Orange, CT. It is a color infrared, leaf-off, 1 foot (30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping objects. The location and shape of features in other GIS layers match the locations of such features on the orthophotography. Also shown are airports, hospitals, courts, schools, and other services. Important geographic locations and boundaries are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial survey is provided through partners between Connecticut Department of Emergency Management and Homeland Security, Connecticut Department of Transportation (DOT), and the National Geospatial-Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through a project funding management, contract/quality assurance (QA/QC).
BASE Lay DATA - Based on data originally from 1:10,000 scale USGS 7.5 minute topographic quadrangle maps published from 1959 to 1990. Data includes roads, railroads, airports, parks, zip codes, towns, rivers, lakes, and reservoirs.層
MAPS AND DIGITAL DATA - Visit the CT ECO website for base map and a variety of other free PDF format. Visit the CT DEP website to download the free map digital spatial data shown on this map.

EXPLANATION
The location and shape of features in other GIS layers will not exactly match the locations of such features on the orthophotography. Also shown are airports, hospitals, courts, schools, and other services. Important geographic locations and boundaries are labeled.
