This map displays 2012 high resolution infrared orthophotography for the towns of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as identifying crop and vegetation conditions as well as supporting identification of mapping features. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection times. Structured data such as major intersections, US roads, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of each feature on the orthophotography. Also shown are airports, hospitals, boundaries, important topographic features, and other features are also labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Public Safety and USGS, the Connecticut Department of Transportation (CTDOT), and the Federal Emergency Management Agency (FEMA). Aerial photography primarily due to differences in spatial accuracy and data collection times. Structured data such as major intersections, US roads, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of each feature on the orthophotography. Also shown are airports, hospitals, boundaries, important topographic features, and other features are also labeled.

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published under the National Geographic Survey (NGS) program, updated and quality assured by Department of Emergency Management and Public Safety.

MAPS AND DIGITAL DATA - Use the CT DEP website for the map and a variety of other data in PDF format. Visit the CT DEP website to download the free map digital spatial data shown on the map.
