This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping end uses. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of these features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Energy and Environmental Protection and the Connecticut Department of Transportation (CTDOT) and the National Imagery Fusion Center (NIFC).
BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published prior to 1969 and 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1993. It includes political boundaries, railroads, airports, hospitals, geographic names, geographic places, streets and roads, and waterbodies. The map is not colorfast and may fade with time.

EXPLANATION
This map is not colorfast and may fade with time. Protect from light and moisture and store in a temperature-controlled environment.

MAPS AND DIGITAL DATA - Visit the CT DEEP website for links to map and a variety of other data in PDF format. Visit the CT DEEP website to download the free map digital spatial data shown on this map.
