EXPLANATION

This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of land cover. The location and shape of features in other DSI items will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection time. Structured data such as major interstate, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of each feature on the orthophotography. Also shown are airports, hospitals, boundaries, important geographic locations and trademarks are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Public Safety, USGS, and the Connecticut Department of Environmental Protection (CT DEP), and the State of New York Department of Environmental Conservation (NY DEC). Orthophotography is publicly supported through project management, contracting and quality assurance/quality control (QA/QC).

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published since 1932 and 1929. Other data sources include EDGECOM, EDGECOM data products, public address, and product data contributors. Streets and names are from Tele Atlas® copyrighted data. Base map information is neither current nor complete.

MASTERS AND DIGITAL DATA - Year the CT DEP archived the line-map and a variety of others in PDF format. Visit the CT DEP website to download the free-map digital spatial data shown on the map.
