This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf-off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping geologic and geological materials. The location and shape of features in other GIS layers may not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structural data such as major interstates, US routes, state routes, streams, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, educational facilities, train stations, and town boundaries. Important geographic locations and waterbodies are labeled. For more information visit the CT DEEP website to download the base map digital spatial data shown on this map.

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Energy and Environmental Protection, The United States Geological Survey (USGS) and the National Imagery and Mapping Agency (NIMA) along with the United States Geological Survey (USGS) providing support through project management, contract processing, and quality assurance/quality control (QA/QC).

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, geographic names and geographic places. Streets and street names are from Tele Atlas® copyrighted data. Base map information is neither current nor complete.

MAPS AND DIGITAL DATA - Visit the CT DEEP website for this map and a variety of others in PDF format. Visit the CT DEEP website to download the base map digital spatial data shown on this map.
