This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification, mapping and management of such features on the orthophotography. Also shown are airports, hospitals, major railroads, and other geographic locations. Important geographic locations and boundaries important geographic locations and road networks are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security (EMHS), the Connecticut Department of Transportation (DOT), and the National Geospatial Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project management, contracting and quality assurance/control (QA/QC).

BASE MAP DATA - Based on data originally from 1:24,000 scale USGS 7.5 minute topographic quadrangle maps published since 1948. All 7.5 minute topographic quadrangle maps are compiled from remote sensing, aerial photographic, oblique photography, oblique stereoimagery, orthophotography, U.S. Census Bureau data, and other derivative products, including topographic, water, drainage, and land cover products.
