EXPLANATION

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Safety (DEM), Town of Bethel (CT), and the Connecticut Department of Public Works (CDPW). Orthophotography is a high resolution, color infrared, leaf-off aerial survey taken in the Spring of 2012. This orthophotography provides many services, such as observing changes in vegetation conditions as well as supporting identification of mapping and other GIS features. This location and shape of features in other GIS layers will not exactly match the locations on the orthophotography. Also shown are airports, hospitals, coniferous and deciduous trees, railroads, and roads. Important geographic locations and boundaries are labeled.

BASE SHP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1950 and 1991. Shp files are available in a Shapefile format including roads, railroads, airports, hospitals, schools and more.

MAPS AND DIGITAL DATA - Visit the CT DEM website for these map and a variety of others in PDF format. Visit the CT DEM website to download the base map digital spatial data shown on this map.
