This map displays 2012 high resolution infrared orthophotography for the Town of Thomaston. It is a color infrared, leaf off, 1 foot (30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification and mapping applications. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structural data such as major streets, US routes, state routes, rivers, railroads, and utility corridors are displayed but may not exactly match the locations of such features on the orthophotography. Also shown are airports, hospitals, boundaries, important geographic locations, and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY: Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Rescue, Bureau of Mapping, and the Connecticut Department of Energy and Environmental Protection, and the National Geospatial-Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project management, contracting, and quality assurance/quality control (QA/QC).

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published from 1980-2005, the Connecticut Department of Energy and Environmental Protection (CT DEEP), and the National Geospatial-Intelligence Agency (NGA) along with the United States Geological Survey (USGS) providing support through project management, contracting, and quality assurance/quality control (QA/QC). The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structural data such as major streets, US routes, state routes, rivers, railroads, and utility corridors are displayed but may not exactly match the locations of such features on the orthophotography. Also shown are airports, hospitals, boundaries, important geographic locations, and waterbodies are labeled.
