This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf-off, 1 foot (30-meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing rip and vegetation conditions, as well as supporting identification of mapping and analysis purposes. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Street-level data was used in this layer due to differences in spatial accuracy and data collection dates. Street-level data was used in this layer due to differences in spatial accuracy and data collection dates.
