This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting aerial photography mapping services. The locations and status of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structures data such as major intersections, US routes, state routes, streets, roads, railroads, and ferry crossings are displayed but may not match the locations of each feature on the orthophotography. Also shown are airports, hospitals, roads, railroads, and other geographic locations and waterbodies are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security (DEEP) and the Connecticut Department of Transportation (CDOT), with the USDA-National Agriculture Imagery Program (NAIP), the Department of Energy (DOE), the National Environmental Satellite, Data, and Information Services, and the National Geospatial-Intelligence Agency (NGA).
BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between the years 1961-1994. The Connecticut Geographic Information System (CGIS) project delivered digital geographic features. Trees and streets and other geographic features were digitized and updated through the years, 1961-1994, using a variety of methods which include aerial photographs, aerial orthophotography, map overlay, land parcel records, and geographic center. Data and features were verified through visual inspection and field verification.
MAY PREPARED BY - Visit the CT DEEP website to download the base map digital spatial data shown on this map.

EXPLANATION
Ensure that the orthophotography is not used as a substitute for current data. The accuracy of basemap data is listed above. Check with the source of the data on the data overlays for the accuracy of specific basemap data. The orthophotography is protected by copyright and is not for redistributing to a third party.
