This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1-foot (30-meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping objects and the locations and shapes of features. The location and shape of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structured data such as major interstates, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are airports, hospitals, boundaries, important geographic locations and road/bridges are labeled.

DATA SOURCES:

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security (CT DEMHS) and the Connecticut Department of Energy and Environmental Protection (DEEP). DEMHS and DEEP own the property rights to the orthophotography. Data is copyrighted by the United States Geological Survey (USGS) and is stored in a georeferenced digital information format.

BASE MAP DATA - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published since 1951. The Department of Energy and Environmental Protection (DEEP) is the owner of the copyright and property rights to the base map data. USGS, I/C/RS, and Federal Land Survey are trademarks of the United States Government, and are used on the base map data with permission of the United States Government.
