This map displays 2012 high resolution infrared orthophotography for the town of Waterbury. It is a color infrared, leaf off, 1 foot (30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing tree and vegetation conditions as well as supporting identification, mapping and planning. The locations and shapes of features in other GIS layers will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Structural data such as major structures, US routes, state routes, streets, railroads, and ferry crossings are displayed but may not match the locations of such features on the orthophotography. Also shown are acres, heights, boundaries, important geographic locations and land ownerships are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Services and Public Safety and the Connecticut Department of Energy and Environmental Protection, and the Federal Emergency Management Agency. Proprietary 2009-2010 aerial photography is available through the Waterbury GIS

BASE MAP DATA - Based on data originally from 1:24,000 scale USDA 7.5 minute topographic quadrangle maps published by the U.S. Geological Survey (USGS), 1970-2010 editions. This map is produced using data derived from 7.5 minute quadrangle maps. Features and attributes of the quadrangle maps are represented on this map as: Streets and highways, railroads, streams, lakes, waterways, water bodies, boundaries and land ownerships;
