This map displays 2012 high resolution infrared orthophotography for the State of Connecticut. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing tree and vegetation conditions as well as supporting identification and mapping of land uses. The location and shape of features on this GIS layer will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection dates. Some features such as major interstates, US routes, state routes, streets, railroads, airports, geographic names and geographic places, railroads, airports, geographic names and geographic places. Streets and match the locations of such features on the orthophotography. Also shown are airports, hospitals, political boundaries, important geographic locations and waterbodies are labeled.

DATA SOURCES

ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security (CT DEM) and the Connecticut Department of Transportation (CT DOT), supported through project management, leveraging and quality assurance/quality control (QA/QC).

MAPS AND DIGITAL DATA - View the CT DEM website for the map and a variety of others in PDF format. Visit the CT DEM website to download the base map digital spatial data shown on the map.
