2012 Color Infrared Orthophoto
Leaf-Off
Woodbury, CT

EXPLANATION
This map displays 2012 high resolution infrared orthophotography for the town of Woodbury. It is a color infrared, leaf off, 1 foot (0.30 meter) aerial survey taken in the Spring of 2012. This infrared orthophotography provides many services, such as observing crop and vegetation conditions as well as supporting identification of mapping details. This mapping and shape of features in other GIS data will not exactly match information shown in the aerial photography primarily due to differences in spatial accuracy and data collection times. Structured data such as major interstates, US routes, state routes, streams, railroads, and key counties are displayed but may not match the locations of each feature on the orthophotography. Also shown are airports, hospitals, educational institutions, land boundaries, important geographic locations and townships are labeled.

DATA SOURCES
ORTHOPHOTOGRAPHY - Aerial imagery is provided through a partnership between Connecticut Department of Emergency Management and Homeland Security, U.S. Geological Survey (USGS), and the Federal Geographic Information Council (FGIC) through the Color Infrared Orthoimagery Project. Imagery data has been supplied through project management, contracting and quality assurance/approval by CT DEP.
BASE MAP DSS - Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published by the U.S. Geological Survey (USGS) and the National Geophysical Data Center (NGDC) with assistance from DEP's Base Map Data Service.
MAPS AND DIGITAL DATA - Visit the CT DEP website for this map and a variety of others in PDF format. Visit the CT DEP website to download the free map digital spatial data shown on the map.
