The map shows the distribution of farmland soils in Ansonia, Connecticut. The soils are mapped using a color-coded legend, with different shades representing different soil types and conditions. The map includes various land use areas such as pastureland, range-land, forestland, and other land types. The map also indicates the presence of high value land for various agricultural crops. The data sources include various government and academic agencies that have contributed to the mapping of soil types and land uses.

**DATA SOURCES**

- Various government and academic agencies
- Detailed soil maps and data
- Regional soil surveys
- High-resolution satellite imagery
- Field surveys and soil sampling

The map is designed to help landowners, farmers, and policymakers understand the distribution and quality of farmland soils in the area, which is crucial for sustainable agriculture and resource management.
