The soils were mapped at a scale of 1:12,000 with a minimum size of 0.5 acre. This mapping process was designed to ensure that soils with economic or regional significance were included. The map does not incorporate current land use changes which may affect the farmland soil designation.

**Prime Farmland Soils**
These soils are deemed prime farmland and that economically produce high yields of fiber, or forage crops. They include those soils that are nearly prime or statewide importance but are used for the resource base for the future of agriculture in CT.

**Legends**
- Prime Farmland Soils
- Farmland Soils
- Non-Farmland Soils
- Open Water
- River, Brook, Stream
- State Boundary
- County Boundary
- Interstate Highway
- U.S. Route Highway
- State Route Highway
- Local Road
- Railroad

**Data Sources**
- USGS 1:24,000 topographic maps
- Farm Service Agency (FSA) soils data
- Connecticut Agricultural Experiment Station (CAES) data
- Natural Resources Conservation Service (NRCS) data

**Explanations**
- The map illustrates farmland soils in Brooklyn, Connecticut. It includes political boundaries, railroads, airports, soils data, and contact information for the NRCS.
