FARMLAND SOILS
DURHAM, CONNECTICUT

LEGEND

Prime Farmland Soils are those soils that have the best combination of factors, making them well suited for use in food production. These soils are generally well-drained, provide adequate amounts of water and air, have sufficient fertility, and are located in areas that are suitable for agriculture. soils that have at least one of the following factors: low fertility, excessive moisture, excessive salt, or inadequate drainage. These soils may still be used for agriculture, but they require additional management practices to achieve optimal productivity. These soils are generally well-drained, provide adequate amounts of water and air, have sufficient fertility, and are located in areas that are suitable for agriculture. soils that have at least one of the following factors: low fertility, excessive moisture, excessive salt, or inadequate drainage. These soils may still be used for agriculture, but they require additional management practices to achieve optimal productivity.
