**DATA SOURCES**

Soils data is obtained from the U.S. Department of Agriculture Natural Resources Conservation Service (NRCS). The soils data were collected and analyzed using various methods, including soil surveys and soil testing. The data are used to identify the different types of soils present in the area and to determine their suitability for various agricultural activities.

**EXPLANATION**

This map is intended to be printed at its original dimensions in order to maintain the integrity of the data. This map does not incorporate current land use changes which may affect the land use and soil characteristics.

**LEGEND**

- **Prime Farmland Soils**: soils that have the appropriate characteristics to support high quality crop production and are currently used for this purpose.
- **Secondary Important Farmland Soils**: soils that are similar in characteristics and are capable of supporting high quality crop production.
- **Locally Important Farmland Soils**: soils that are important due to their unique characteristics or the specific needs of the area.
- **Other Soils**: soils that do not meet the criteria for prime farmland but have potential for agricultural use.
- **Urban and Other Non-Agricultural Uses**: areas that are not suitable for agricultural production.

- **Open Water**: bodies of water that are present in the area.
- **Rivers and Streams**: waterways that flow through the area.
- **State Boundaries**: boundaries of state jurisdictions.
- **County Boundaries**: boundaries of county jurisdictions.
- **Federal Highways**: roads that are part of the federal highway system.
- **Roads and Railroads**: transportation networks that are present in the area.
