FARMLAND SOILS
EAST WINDSOR, CONNECTICUT

LEGEND

- Prime Farmland Soils: soils that have the best combination of physical and chemical characteristics for producing food, feed, fiber, forage, and other agricultural products. They are well-drained, have a good soil structure, and are generally deeper than 1 meter.
- Important Farmland Soils: soils that contribute greatly to the productivity or value of the nation's farm resource base. They are generally well-drained, have a good soil structure, and are 1 or more meter in depth.
- Local Farmland Soils: soils that contribute to the productivity or value of the state's farm resource base. They are generally well-drained, have a good soil structure, and are 1 or more meter in depth.

EXPLANATION

The map shows the farmland soils in the East Windsor area. The soils are classified based on their physical and chemical characteristics, which determine their suitability for various agricultural uses. The map is intended to be printed at its original dimensions in order to maintain the accuracy of the data. The data sources include various agencies and datasets that provide information on the soil characteristics.

DATA SOURCES

- USDA Natural Resources Conservation Service
- Connecticut Agricultural Experiment Station
- University of Connecticut
- Connecticut Department of Agriculture

The map was created by the USDA Natural Resources Conservation Service and is based on data from various sources. The map is intended to be used as a planning tool for agricultural development. The data sources include surveys, field observations, and laboratory analyses.
