Farmland Soils
Harwinton, Connecticut

Legend

Prime Farmland Soils: these soils have the best potential to produce high yields of prime farmland crops when treated and managed according to acceptable farming practices.

Surrounding Resource soils: have potential for economic production of high value food, fiber, or horticultural crops. These soils may be managed as prime farmland. This category includes "Prime Farmland" soils that are not suitable to be productive soils that are suitable to be productive soils that are productive soils that are designated as farmland soils. As the minimum size delineation is approximately 3 acres, this map does not show all the soils designated as farmland soils.

This land may be important to the local economy due to its high agricultural productivity. It identifies productive soils that are suitable to be productive soils that are designated as farmland soils.

Prime Farmland Soils are those soils that have the best potential to produce high yields of prime farmland crops when treated and managed according to acceptable farming practices.

This map is intended to be printed at its original dimensions in order to maintain the accuracy of hydrography, geographic names and geographic places. Streets and roads are not included on this map. The soils shown on this map are delineated at the county level and the minimum size delineation is approximately 3 acres. It identifies productive soils that are suitable to be productive soils that are designated as farmland soils.

The USEPA has determined that soils which may be sold for the purpose of construction or land development may still be subject to federal regulation.

Data Sources:

- USDA-NRCS: The USDA-NRCS provides a variety of soil surveys and data that can be used to identify productive soils.
- Connecticut Department of Agriculture: The Connecticut Department of Agriculture provides information on farmland preservation and the protection ofprime farmland crops.
