Locally Important Farmland Soils are those soils that fail to meet one or more of the requirements of prime farmland, but have productivity characteristics that provide a potential for high value land, since it is often used in non-agricultural operations, or because it is subject to erosion or other degradation, which may affect the farmland designation.

DATA SOURCES

NRCS State Soil Map. Soil survey maps produced by the U.S. Dept. of Agriculture, Natural Resources Conservation Service. These maps are used to identify soil types and their respective characteristics. 

Lambert Conformal Conic Projection

This map was produced by CT DEP and NRCS. Soil survey maps are based on the U.S. Department of Agriculture, Natural Resources Conservation Service, State Soil Survey Map. It includes soils of the future of agriculture in CT.
